Jodhpur Institute of Engineering and Technology

A WEB TECHNOLOGY PROJECT REPORT

ON

(Fattitude-A Dream Café)

In partial fulfillment of

B.E II yr **(Computer Science & Engg.)**

Submitted To:

Neelam Bohra
Designation -Assistant Professor

Submitted by:

Preet Mathur
CSE, ***II*** ND Year

Acknowledgment

In the accomplishment of completion of my project on **Fattitude-A Dream Cafe** .I would like to convey my special gratitude to Mrs.Neelam Bohra ma'am of CSE department and as well as Mrs. Mamta Garg ma'am HOD of CSE department -JIET , who gave us this golden opportunity to do this outsanding project.

Your valuable guidance and suggestions helped me in various phases of the completion of this project. I will always be thankful to you in this regard.

-**PREET MATHUR**

1.Introduction

The first question arises is why any café need website?
Running a café is a huge task that comes with a never-ending to-do-list.
Guests are going to look at our social media accounts and website to stay in the know about your restaurant. Our website is the perfect platform to update guests about new menu items, specials, address, hours of operation, events, seasonal hours, etc. We just make sure to always make it a priority to frequently check that information on the website is accurate. Nothing is more frustrated for a customer than to be provided incorrect information.

Our website include online food order system as well as seat reservation also. The users can also give their opinions about the café by giving a rating and writing a review.

The main advantage of our website is that it greatly simplifies the **ordering process** for the customer. When the customer visits the ordering web page, they are presented with an interactive and up-to-date menu, complete with all available options and dynamically adjusting prices based on the selected options. After filling the Order Now form customer can see their order details below the form only. This provides instant visual confirmation of what was selected and ensures that items in the order are what was intended.

Our website also greatly lightens the load on the cafe's end, as the entire process of taking orders is automated. Once an order is placed on the web page, it is entered into the

database and then retrieved, in pretty much real-time, on the cafe's end. Within this all items in the order are displayed, along with their corresponding options and delivery details, in a concise and easy-to-read manner. This allows restaurant employees to quickly go through the orders as they are placed and produce the necessary items with minimal delay and confusion.

Our website also provide **Seat Reservations** . That benefits for customers venue such as direct communication with guests, capacity tracking, digital waitlists, and more.

FATTITUDE-A DREAM CAFÉ-

Our webite has follow features-

1. Allow Customers to Make Reservations Online where they can make reservation by fill the enteries- day, date and time , number of persons in few minutes.
2. order food online
3. Dynamic and pop-up effects that attracts customers.
4. Responsiveness and Mobility
5. Attractive gallery
7. Specialty column
8. Social Media Integration

2. Technology used in Project

In this section give the details of technology/programming languages you have used during the project implementation and the training duration.

In my project I have used various programming languages such as HTML , CSS, JAVASCRIPT AND PHP.

HTML

HTML (**H**yper**T**ext **M**arkup **L**anguage) is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables.

CSS

CSS (**Cascading Style Sheets**) is used to style and layout web pages — for example, to alter the font, color, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

JAVASCRIPT

JavaScript is a programming language that adds interactivity to your website. This happens in games, in the behavior of responses when buttons are pressed or with data entry on forms; with dynamic styling; with animation, etc.

PHP

PHP (**Hypertext Preprocessor)** is known as a general-purpose scripting language that can be used to develop dynamic and interactive websites. It was among the first server-side languages that could be embedded into HTML, making it easier to add functionality to web pages without needing to call external files for data.

I have used html in making the structure of the website.

It contain six section home ,about us ,our specialitis ,gallery and menu. And a navigation bar.

I have used external css file for adding color, fonts,etc in the website.

I have used javascript for adding dynamic effects like pop-up, slide show, slide preview,etc.

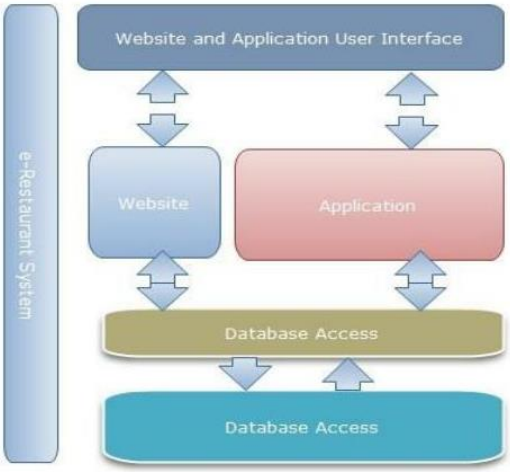
MySQL

MySQL is a popular open source database management system commonly used in web applications due to its speed, flexibility and reliability. MySQL employs SQL, or Structured Query Language, for accessing and processing data contained in databases.

I have use MySQL for backend through Xamp.

3.Technical Details of Project/Study

3.1 Architectural Overview



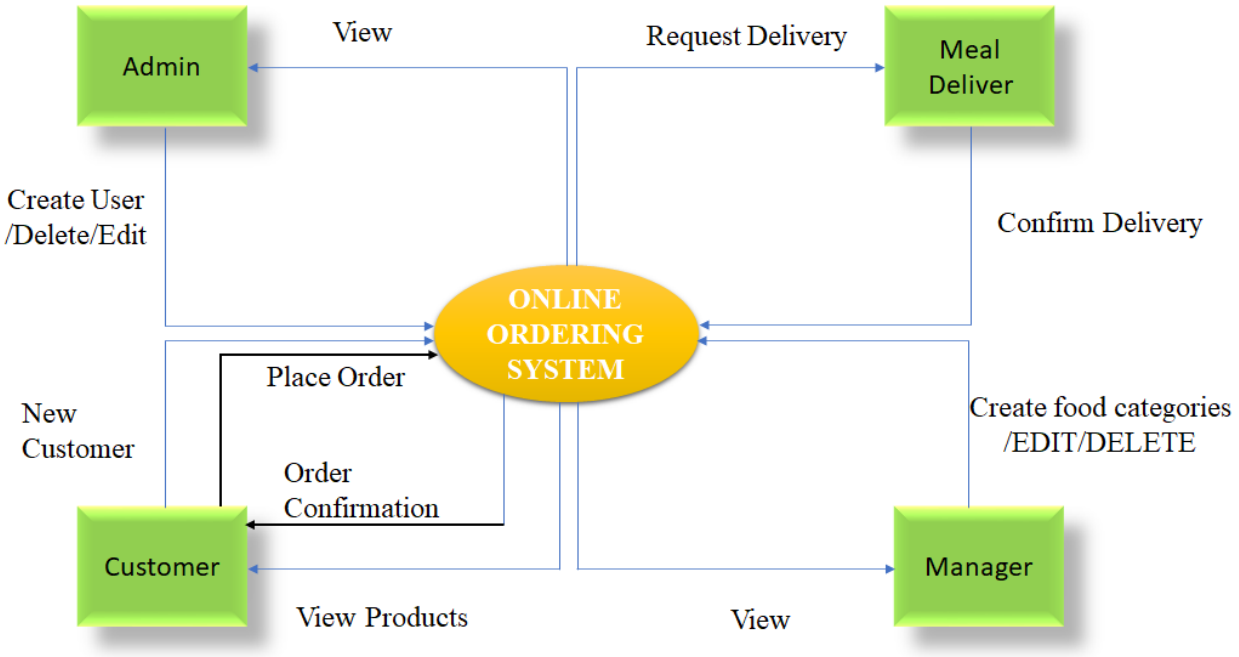
Three-Layered Services Application

3.2 FUNCTIONS/MODULES DETAILS

- Content Management System
- Clear Navigation
- Responsive
- Database Solution

3.3 DATA FLOW DIAGRAM

ONLINE ORDERING SYSTEM



SEAT RESERVATION SYSTEM

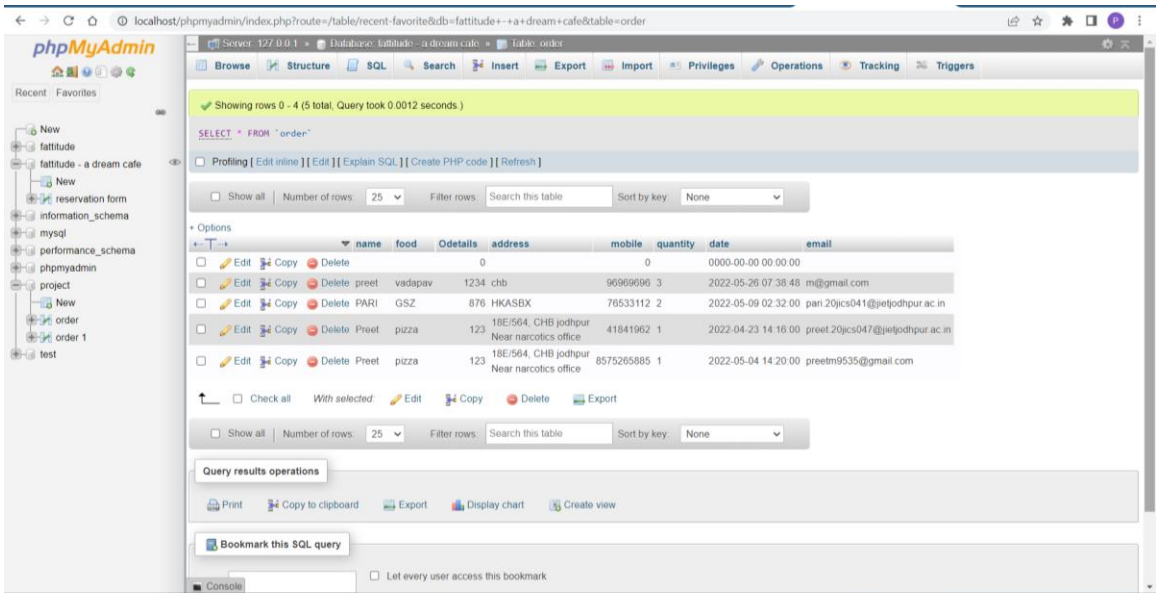
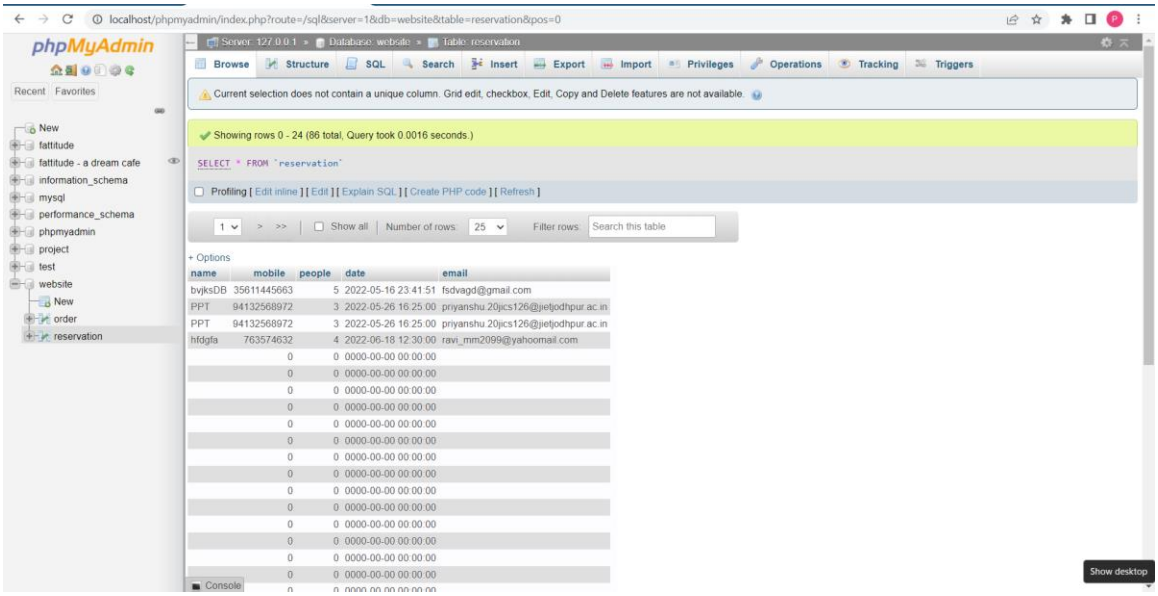
ORDER FORM DATABASE



RESERVATION FORM DATABASE



5.Applications

In this section mention the detail the real world applications of the software/hardware project done during the training period.

A website **gives you control over the image of your** café. It gives a restaurant the platform to tell their own story, in their own words (unlike third party sites). Customers will get a good idea of who you are, as well as get an idea of the overall atmosphere of the café.

My website will make it easy for the customers to order food and reserve their seat online just by filling all necessary details and they can see their input details below the form only.

It will also lithens the load for café side because all the process is automated.

6.Future Work

1.Online promo card- An enticing promo code offer can be the determining factor between someone ordering takeout from your restaurant or slapping together a PB&J sandwich and calling it a night.
2.Daily updates
3.Select seat in seat reservation- this will helip cutomers to select their seat according. And already reserved seat will be shown with different color,just like online ticket booking in theaters.

7.Conclusion

Fatitude-A Dream Café is a website for restaurant that will help both customers and café to make online ordering and seat reservation system easier.
